JO MARTIN

SENIOR NETWORK ENGINEER | Enterprise networking & network resilience

Hobart, Tasmania • linkedin.com/in/jo-martin-86961560 • github.com/jo-martin

PROFESSIONAL PROFILE

Senior network and infrastructure engineer with more than 20 years of experience across complex Tasmanian government and private-sector ICT environments. Experience in BGP-based multi-provider connectivity, OSPF and Layer 2/3 design, HPE Aruba network modernisation, infrastructure documentation and major incident leadership. Combines hands-on engineering with technical direction, change governance and a broad systems and cloud background. Seeking senior network engineering opportunities in telecommunications or managed network services.

CORE CAPABILITIES

Networking eBGP / iBGP • OSPF • enterprise LAN/WAN • Layer 2/3 routing and switching • VLANs • multi-provider connectivity

Platforms HPE Aruba AOS-CX / VSX • NetBox IPAM/DCIM • Cisco Catalyst • data-centre interconnects • network documentation

Delivery & operations technical leadership • major incident control • change governance • network migration • vendor coordination • operational standards

SELECTED TECHNICAL ACHIEVEMENTS

- Implemented eBGP-based multi-provider resilience at multiple government sites; since 2022, planned and unplanned provider equipment outages have not interrupted business operations.
- Led migration from HPE Aruba AOS-Switch to AOS-CX, implementing OSPF as the IGP and iBGP for internal route distribution; designed a DCaaS core with an Aruba CX VSX pair and diverse carrier links.
- Established NetBox as an IPAM/DCIM source of truth, including physical infrastructure mapping, standardised labelling and records for 36 provider circuits, their capacities and service tenants.
- Acted as Incident Controller for major government ICT outages, coordinating technical teams, vendors, stakeholder communications and follow-up improvements; chaired change governance meetings.

PROFESSIONAL EXPERIENCE

Senior Network & Cloud Engineer 2021–present

Department of Justice (Tasmania)

- Senior technical role spanning enterprise networks, infrastructure architecture and service-critical government platforms; developed agency Network Design Principles and baseline configuration guidance.
- Delivered network improvements covering eBGP resilience, HPE Aruba switching, OSPF/iBGP design and a new data-centre network core; integrated network documentation into operational runbooks.
- Redesigned and segmented the judiciary's video-conferencing network, coordinating contractor-led courtroom migrations; the project was delivered ahead of schedule and under budget.
- Led the technical migration from on-premises Finance One to TechnologyOne Cloud SaaS, including integration redesign with GoAnywhere MFT, SFTP, OAuth 2.0 and Microsoft Entra ID.

Technical Lead / Senior Systems Administrator – Infrastructure & Networks

2016–2021

Department of Premier and Cabinet (Tasmania)

- Technical Lead and 2IC to the ICT Manager, providing engineering direction and final technical escalation for networking, storage, Microsoft SQL Server, Windows and Linux.
- Led the redesign of an ageing departmental network, improving Layer 3 routing, VLAN architecture, upstream BGP integration, monitoring, configuration baselines and security hardening.
- Led Office 365 email and voice migration and other high-risk changes; prepared requests for change, coordinated implementation teams and completed the migration within the planned timeframe.
- Strengthened ITIL-based change, incident and knowledge-management practices, including chairing Change Management Board meetings and leading major incident response.
- Designed and implemented a 10 Gbit/s iSCSI storage network between Nimble SANs and HPE ProLiant hypervisors, supporting backup/recovery objectives and increased server I/O.

ICT Consultant

2016

Independent / Sole Trader

- Delivered government infrastructure services, including cross-data-centre migrations of Fibre Channel SAN fabrics and network infrastructure.

Engineer – Engineering Southern

2015

Alphawest Services / Optus Business

- Delivered technical consulting, presales input, network solution design, scoping and estimates for public- and private-sector clients.
- Supported Fibre Channel SAN environments, Citrix NetScaler managed services and Microsoft Exchange migrations; mentored colleagues and provided senior escalation.

Technical Specialist – Infrastructure Services

2009–2015

Department of Premier and Cabinet (Tasmania)

- Supported whole-of-government networks, data centres, Cisco Catalyst switching, Fibre Channel storage, F5 load balancing, VMware virtualisation, Exchange and unified communications.
- Planned and performed firmware and driver upgrades across switching, blade, storage and server platforms; contributed Cisco VoIP interoperability testing to the Modern Communications Project.

Computer Systems Officer

2007–2009

Department of Premier and Cabinet (Tasmania)

Service desk and data-centre operations, CMDB management, voice gateways and Windows, Linux and Solaris administration.

Desktop Support Officer

Earlier career

Tasmanian Government

First-level ICT support, backup administration, standard operating environment maintenance and desktop deployment.

EDUCATION & PROFESSIONAL CREDENTIALS

Bachelor of Computing | University of Tasmania · Golden Key International Honour Society

Diploma of Information Technology (Network Engineering) | TAFE Tasmania

Certificate IV in Information Technology (Network Administration) | TAFE Tasmania

Industry credentials and training CCNA (expired); ITIL v3 Foundation; Panduit; Introduction to Service Management with ITIL 4 (2023); additional Microsoft cloud and security training.
